

LifeWood[®]

Micronized Copper Azole

EPP (Environmentally Preferable Product)
Highlights and Benefits

FIRST WOOD TREATMENT PROCESS TO RECEIVE EPP STATUS

The MicroPro[®] technology is the first treated wood process to be certified under Scientific Certification Systems Environmentally Preferable Product (EPP) program based on Life-Cycle Assessment.

REDUCED ENERGY USE

The MicroPro[®] treated wood process reduces total energy use by approximately 80% and greatly reduces greenhouse gas emissions.

LARGELY ELIMINATES COPPER RELEASES

Wood products treated with the MicroPro[®] process result in the release of 90% to 99% less copper into aquatic and terrestrial environments when compared to standard treated wood products. The very small amount released bonds readily to organic matter in the soil and becomes biologically inactive, thus effectively eliminating eco-toxic impacts.

MicroPro[®]/Lifewood products, as described in the ICC Evaluation Services, Inc. ESR-2240, meet all major model building code requirements
